

FEDCO Singapore Office Relocates to WaterHub

FOR IMMEDIATE RELEASE

Monroe, Michigan, USA – February 6, 2014

Keeping with our continued growth in the region, Fluid Equipment Development Company (FEDCO) has relocated its Singapore office to the PUB's WaterHub to expand its technology presence in Asia.

FEDCO is also expanding its regional presence by investing in a services facility to better cater to customers as well as adding a comprehensive customer training center with FEDCO products and the ability to hold customer training seminars. These facilities will be operational by June 2014. This will allow FEDCO to train customers on our industry leading high efficiency pumps and energy recovery solutions. Customers will also learn all aspects of installation, operation, and maintenance of FEDCO's expanding product lines of feed pumps, booster pumps and energy recovery equipment for reverse osmosis (RO). The WaterHub location will allow FEDCO to collaborate on new technology development of its innovative products for RO and water reuse solutions for the water industry.

The FEDCO facilities will be co-located with Torishima Pump Mfg. Co., Ltd, established leaders in large scale desalination projects.

"PUB WaterHub was a location of choice and a natural evolution in FEDCO's continued growth in the region. As our continued improvements in existing products and innovation in new products have gained acceptance, this proximity with our natural partners will help FEDCO and Torishima engage in more meaningful ways and further strengthen our foothold in Asia and Australia. This also sets the stage for us to add resources in the region to help us support our customers. Being close to our customers and continually providing support is very important to us." stated Mr. Sanjeev Verma, Director of Sales and Marketing.

The FEDCO Singapore new location:

FEDCO Singapore Pte Ltd
82 Toh Guan Road East
#C2-14-4, WaterHub
Singapore 608576

About FEDCO

Fluid Equipment Development Company, LLC or FEDCO is the innovative developer and manufacturer of high pressure pumps and energy recovery devices for seawater and brackish water reverse osmosis desalination. In July 2013, FEDCO became affiliated with Torishima Pump Mfg. Co., Ltd. to expand our services and support to customers worldwide. Together we provide energy

efficient and energy recovery rotating machinery for reverse osmosis desalination. More information is available at www.fedco-usa.com.
